On-Site Machining  
Services

# On-Site Machining Services

Bringing the capabilities of a fully equipped machine shop to your site

Dismantling of process equipment is sometimes impossible and often uneconomical. Enter on-site machining. Repair takes place on a piece of equipment without the need to strip it out and move it to a repair facility. Minimising downtime can lead to great time and cost savings. The repair workshop is taken to the customer rather than the other way around.

On-site machining can take place in a minimal timeframe and sometimes while adjacent machinery is still running. Tolerances and finishes are reliably reproduced in field environments using special portable machine tools.

However, even the best machining tools require experienced and well-trained operators. Precise measurements are essential to develop a suitable machining strategy.

## Advantages

- Offers precise, turnkey services with minimum dismantling required
- Provides compact tools for tight, cramped locations
- Enables simultaneous jobs with multiple tools and sizes
- Saves time, reduces costs compared to offsite services
- Benefits remote locations
- Improves repair accuracy and efficiency with our laser and optical measurement systems
- Utilizes stocked mobile shops with advanced machines for fast, efficient cutting, weld prep and lathing

TEAM has one of the largest in-stock supplies of on-site machining equipment. Additionally, we custom design and fabricate specialty equipment to handle a number of challenges.

All machines are pneumatically and hydraulically powered for use in plant environments where intrinsically safe operations are mandatory.

There is no one-size-fits-all approach to on-site machining. Our highly trained team is dedicated to formulating a repair procedure that minimises downtime and ensures quality repair.

## Solutions Offering

- Self-levelling Machines
- Flange Facing
- Milling
- Line Boring
- Journal Turning
- Drilling and Metal Disintegration
- Pipe Cutting and Weld Prep
- Specialist Machining
- SILK OEM

Team strictly adheres to API, NBIC and ASME codes, guidelines, recommendations, and specifications.

## Speciality Machining

In addition to our core machining capabilities, TEAM also offers a range of specialist services to support complex and critical operations. These include **laser tracking** for precision measurement and alignment, **diamond wire cutting** for accurate and controlled sectioning of large or reinforced components, and **metal disintegration** for the safe removal of broken studs, bolts, or tooling without damaging the base material. Our advanced solutions are designed to meet the highest standards of accuracy, efficiency, and safety.

## Safety First, Quality Always

TEAM technicians are fully trained experts who have a high regard for both safety and the requirements of customer work sites. By utilising the full range of TEAM's on-site machining services, you receive work and results that exceed any standard of quality, ensuring plant productivity and longevity.

You'll also realise savings in transportation, logistics, labour, time, and – of course – money.

## Why TEAM?

- Single supplier for asset integrity management solutions worldwide
- Company-wide commitment to safety
- Trained and certified expert technicians
- Complete range of maintenance and repair services
- Engineering, manufacturing and technical support
- World-class quality processes and systems

**TEAM** experts are available  
24 hours a day, 7 days a  
week, 365 days a year.
